Effective November 30, 2007, Ultra Electronics DNE Technologies will discontinue support of Version 3.X software releases for the TAC Multi-Service Access Concentrator. Upgrades from Version 3.X to Version 5.0 are available for \$1,000 per Interface Control Module with Ethernet (ICM-E) by ordering TAC UPGD SW. The TAC-300 always has one ICM-E while the TAC-900 can be populated with up to 3 ICM-Es. DNE will require the serial numbers of the ICM-Es to be upgraded at time of order to assure any subsequent repair and maintenance of the TAC System is performed properly.

The Version 5.0 software includes support of the ATM Forum UNI 4.0 interface, support for the V.34 FNBBDT Compressed/Secure Voice Interfaces, and integration of all 3.X patch releases. Detailed Release Notes are available at www.dnetech.com for registered users on the manuals web page. Network Operators should be aware that this upgrade must be installed offline and requires the system configuration to be re-entered from the operator console. To order software, contact Jeanine Standley at 203-697-6561. For technical information, dial 203-697-6600 for DNE Technical Support.
